

TECHNOLOGICAL AND APPLIED STUDIES FACULTY

Assessment Task Notification

Course: Enterprise Computing	
Task Type: Enterprise Project - Phase 2	Task Number: 3
Topic: Data Visualisation	
Weighting: 30%	Marks: 35
Issue date: Term 2 Week 7 2026	Due date: Term 2 Week 11 2026
Outcomes Assessed: EC-12-05: Applies tools and resources to analyse complex datasets EC-12-08: justifies the selection and use of tools and resources to design and develop an enterprise computing system EC-12-10: evaluates the effectiveness of an enterprise computing system EC-12-11: communicates an enterprise computing solution to a specific audience	
Task Description: In phase 2 of the enterprise project, students extend their completed Decision Support System (DSS) by analysing multiple stakeholder requirements and designing respective data visualizations for each stakeholder group. Students will demonstrate how data visualisation can simplify understanding, tell a clear and coherent story and highlight significant outcomes generated by their DSS. <i>Stage 1: Identifying and Defining</i> In this stage, students identify, define and analyse the stakeholders of their DSS and explain how each stakeholder requires different data visualisations to support decision-making. Students are required to explain the purpose of each dashboard or visualisation, including the “data story” being communicated, the trends, patterns, relationships and insights stakeholders need to interpret, and how these visualisations assist enterprise decision-making. Students must analyse and assess data integrity considerations, including ownership of data, reliability of data sources, validation processes and risks of incorrect or misleading interpretation.	

Stage 2: Researching and Planning

In this stage, students research relevant data visualisations developed by other enterprises. They must analyse the features of these visualisations to evaluate their clarity, effectiveness and suitability for different audiences, and apply these insights to the planning of their own visual outputs. Students must demonstrate understanding of data visualisation principles relevant to dashboard design, stakeholder interpretation and user experience. They should evaluate existing designs for their strengths and weaknesses and demonstrate how their research will guide the planning of the dashboards for different stakeholders of their DSS.

Students must research principles of **UX/UI design** and demonstrate how these principles will be incorporated into their visualisations.

Students must clearly identify and justify the input datasets required for each visualisation in relation to stakeholder needs and requirements. They must justify their design decisions according to various principles of dashboard design and factors studied throughout this unit, including (but not limited to) the choice of chart or graph type, colour schemes, layout and placement on dashboards.

Students must plan which trends, patterns, relationships and insights will be generated and explain how these will be presented visually. They must also plan for accessibility requirements and inclusive design considerations.

Stage 3: Producing and Implementing

In this stage, students implement their planned data visualisations using suitable software tools such as spreadsheet software (Excel). Students must record, explain and analyse the process followed to create each visualisation and evaluate how effectively the visualisations communicate trends, patterns and insights.

Where appropriate, students may automate the updating of visualisations so that changes in the underlying database are reflected in real time or dynamically within the dashboard.

Students must also demonstrate any actions they have incorporated to maintain data integrity and security.

Stage 4: Testing and Evaluating

In this stage, students test their data visualisations against defined test criteria. The testing process must be recorded from the perspective of training the stakeholders who will be using the DSS for generating insights and making important decisions.

Students must then analyse and evaluate their visualisations in terms of depth of insight, clarity of communication, potential bias, security and overall user experience. This evaluation should

Arthur Phillip High School

consider how effectively the visualisations support stakeholders' decision-making.

Deliverables:

Students must submit:

- A data visualisation **portfolio** containing appropriate documentation for each project stage
- A narrated **screen recording** demonstrating data preparation, dashboard development and testing processes
- A narrated **stakeholder-focused** video presentation introducing dashboard features, visualisations, insights and decision-making capabilities

Permissible Use of A.I.:

A.I tools may be used for research purposes and data generation for multiple stakeholders.

Students are required to include:

- All AI prompts used
- Clear screenshots of generated outputs linked to each prompt

They must be presented in an appendix at the end of the project document and referenced at required places in their documentation.

See A.I policy in the Stage 6 Assessment Handbook for further details.

Marking Rubric:

Stage 1 : Identifying and Defining (8 Marks)

Core descriptor:

The student analyses stakeholder requirements and explains how different stakeholders use DSS outputs to support decision-making. The student explains the purpose of data visualisation for each stakeholder by clearly articulating data stories, insights, visible trends, patterns and decision-making outcomes. The student analyses and assesses data integrity considerations, including ownership, source reliability, validation and risks of misinterpretation.

Level	Descriptor
Outstanding (8)	The student comprehensively analyses multiple stakeholder requirements and clearly explains how different data visualisations support stakeholder-specific

Arthur Phillip High School

	decision-making. Detailed analysis of data stories, trends, patterns, relationships, insights and data integrity considerations is consistently demonstrated throughout the portfolio using highly relevant supporting evidence.
High (6)	The student effectively analyses stakeholder requirements and explains how data visualisations support decision-making for different stakeholders. Clear analysis of data stories, trends, patterns, insights and data integrity considerations is demonstrated throughout most sections of the portfolio.
Sound (4)	The student explains stakeholder requirements and describes how data visualisations support decision-making. Appropriate descriptions of data stories, trends, patterns, insights and integrity considerations are included in the portfolio.
Basic (2)	The student describes basic stakeholder requirements and includes limited explanation of visualisation purposes, insights or data integrity considerations.
Limited (1)	The student identifies stakeholders or visualisation purposes with minimal explanation or supporting evidence.

Stage 2: Researching and Planning (9 Marks)

Core descriptor:

The student **evaluates** enterprise data visualisation examples and **analyses** their clarity and effectiveness. The student **explains** how UX/UI principles influence the design of effective visualisations and **justifies** design decisions, including dataset selection, chart or graph type, colour schemes, layout, placement on dashboards, accessibility and inclusive design considerations. The student **analyses** which trends, patterns, relationships and insights will be generated and how they will be presented.

Level	Descriptor
Outstanding (9)	The student comprehensively evaluates enterprise dashboard examples and thoroughly justifies all dashboard planning and UX/UI design decisions. Detailed evidence of stakeholder-focused planning, dataset justification, dashboard organisation, accessibility and visual design reasoning is consistently demonstrated throughout the portfolio.
High (7)	The student effectively analyses enterprise dashboard examples and justifies dashboard planning and UX/UI design decisions. Clear evidence of stakeholder-focused planning, dataset selection and visual design considerations is demonstrated throughout most sections of the portfolio.
Sound (5)	The student explains dashboard planning and design decisions with appropriate evidence of research, UX/UI principles and stakeholder considerations.
Basic (3)	The student describes some dashboard planning and design decisions with limited justification, stakeholder focus or research evidence.

Arthur Phillip High School

Limited (1)

The student identifies basic planning or design elements with minimal explanation or supporting evidence.

Stage 3: Producing and Implementing (9 Marks)

Core descriptor:

The student implements data visualisations using appropriate software tools and analyses how dashboard features, visualisations and implementation techniques communicate trends, patterns and insights derived from the DSS. The student explains and evaluates the effectiveness of implemented dashboard features and automation processes where applicable.

Level	Descriptor
Outstanding (9)	The student comprehensively implements highly effective stakeholder-focused dashboards using appropriate software tools. Detailed evidence of development processes, dashboard features, implementation techniques, automation processes and communication of trends, patterns and insights is consistently demonstrated throughout the portfolio and screen recording.
High (7)	The student effectively implements stakeholder-focused dashboards and clearly explains dashboard development processes, features and implementation techniques. Appropriate evidence of dashboard functionality and communication of insights is demonstrated throughout most sections of the portfolio and screen recording.
Sound (5)	The student implements functional dashboards and explains the basic development process, dashboard features and communication of insights.
Basic (3)	The student demonstrates limited implementation of dashboards with basic explanations of dashboard functionality or development processes.
Limited (1)	The student identifies implemented dashboard features with minimal explanation or supporting evidence.

Stage 4: Testing and Evaluating (5 Marks)

Core descriptor:

The student evaluates the effectiveness of data visualisations using stakeholder-focused test criteria. The student analyses how aggregation, filtering, clarity, bias and depth of insight influence interpretation and decision-making. The student evaluates user experience and justifies realistic improvements to enhance clarity, accessibility and stakeholder usefulness.

Level	Descriptor
-------	------------

Arthur Phillip High School

Outstanding (5)	The student comprehensively analyses and evaluates dashboard effectiveness, stakeholder usability and communication of insights using detailed testing evidence. Thorough evaluation of filtering, aggregation, clarity, bias, user experience and realistic improvement recommendations is consistently demonstrated throughout the portfolio and screen recording.
High (4)	The student effectively analyses and evaluates dashboard effectiveness and stakeholder usability using clear testing evidence. Appropriate evaluation of interpretation, user experience and realistic improvement recommendations is demonstrated.
Sound (3)	The student explains dashboard effectiveness and usability with appropriate testing evidence and some improvement suggestions.
Basic (2)	The student describes limited testing or evaluation of dashboard effectiveness, usability or stakeholder interpretation.
Limited (1)	The student identifies minimal testing or evaluation evidence.

Stage 5: Stakeholder communication (4 Marks)

Core descriptor:

The student communicates the purpose, functionality and insights of the data visualisation dashboard to stakeholders using appropriate presentation techniques. The student demonstrates how the dashboard supports stakeholder decision-making and explains the insights generated from the visualisations.

Level	Descriptor
Outstanding (4)	The student communicates the dashboard with a high level of clarity, sophistication and professionalism for multiple stakeholders. The presentation clearly demonstrates dashboard functionality, stakeholder-specific visualisations, generated insights and decision-making capabilities. Explanations are detailed, logical and highly audience-focused, with highly effective use of narration, terminology and demonstration techniques tailored to different stakeholder requirements.
High (3)	The student effectively communicates dashboard functionality, stakeholder relevance and generated insights for multiple stakeholders. The presentation demonstrates clear understanding of dashboard features and explains how different visualisations support stakeholder decision-making. Appropriate terminology and presentation techniques are used throughout the demonstration.
Sound (2)	The student communicates the functionality and purpose of the dashboard and identifies some stakeholder-specific insights generated from the visualisations. The presentation demonstrates a satisfactory understanding of dashboard

Arthur Phillip High School

	features, although explanations may lack detail, depth or consistent focus on multiple stakeholder needs.
Basic (1)	The student demonstrates limited communication of dashboard functionality or stakeholder relevance. The presentation includes basic descriptions of visualisations or dashboard features with limited explanation of how the dashboard supports different stakeholders or generates useful insights.
Limited (0)	The student provides minimal or incomplete evidence of communication or demonstration of the dashboard, stakeholder requirements or visualisation insights.

IMPORTANT NOTE: If you are absent on the day of the task, you must follow School [illness/misadventure application](#) procedures and see the Head Teacher on your next day of School attendance. Otherwise a zero mark will be awarded and a course warning issued.

Arthur Phillip High School

ASSESSMENT PROCEDURES

This is a brief summary of the assessment policy at Arthur Phillip High School. Please see the assessment policy for clarity and further information. This summary does not supersede the policy.

It is the student's responsibility to be alert to the notification of tasks. In case of absences from school, students will need to check with their teachers upon their return if they have missed any notifications of upcoming tasks. Refer to the online policy for more detail.

1. Students who **fail to submit** an assessment task by the due date and time **8:45 am may be given zero** and a course warning if they have no valid reason.
2. Students who **fail to attend** an assessment task which is to be completed at School **may be given zero** and a course warning if they have no valid reason.
3. All work that is submitted for assessment purposes must be the independent work of the student concerned (or where group work is permitted, of the students concerned). Student malpractice including plagiarism, collusion, breach of assessment conditions or a non-serious attempt **may result in a zero** being awarded.
4. Students **should not miss** any timetabled periods, nor come to school **late** without a valid reason on the day an assessment task is to be completed. It may be considered malpractice, as it could be seen as gaining an unfair advantage over other students.
5. If a student submits a task which is deemed to be a **non-serious attempt** then a zero mark may be awarded. Students should complete an assessment task knowing they **must** make a genuine effort at the assessment task or examination. A student's task or exam is considered a **non-attempt** if there is no evidence of academic engagement with the task or exam. Students are required to attempt a range of question types throughout the assessment task or examination paper.
6. If you believe factors beyond your control, e.g. sickness, family misfortune, have affected your ability to do your best on a task, you may apply for an extension by seeing the appropriate Head Teacher of the course at least 24 hours before the due date. No extensions will be granted to applications received on the day a task is due.
7. Students who **fail to submit** an assessment task by the due date or **fail to attend** a task that is to be completed at school, but **who have a valid reason** (such as sickness or approved leave validated by appropriate documentation) are expected to follow Illness/Misadventure processes.
8. If a student is **absent** on the due date of an assessment task, it is the student or parent/guardian's responsibility to phone the school (**Telephone: 8855 8100**) and inform the Head Teacher of the subject of the student's absence. An illness/misadventure appeal application form should be completed and submitted **online** with accompanying evidence (C1 form and a Doctor's certificate). This must be submitted within 48 hours. Hard copies of evidence should be submitted to student services. Students should be aware that they may be expected to complete the task **on their first day back to school, NOT the first day they have their next lesson of the impacted subject**. Failure to follow this process may result in the application being rejected and a **zero mark** being awarded.
9. Students seeking disability provisions for assessment tasks are to communicate with the Learning Support Faculty and their Teacher at least two weeks prior to the date of the assessment task. The Teacher will inform students seeking disability provisions of the exact venue and details for the task.
